

# Top 3 Biggest Mistakes Made by Most Clinicians and How to Avoid It

There are three different mistakes made by nearly 90% of all clinicians. They are...

1. Making it complicated for themselves
  - Sequencing variations
  - Compartmentalized thinking and approach
  - Not streamlining the fundamentals
2. Still doing things learned in school.
  - School teachings are outdated.
  - Much better techniques and methods today
  - Being more than a mechanic is necessary today.
3. Prioritizing insurance and documentation requirements ABOVE patient satisfaction and loyalty requirements
  - Old forms and tools
  - Patients hate old forms
  - Use new forms that give you better understanding of the patient's needs, NOT technical info.
